

EX72

LOAD SENSING VALVE

TECHNICAL CATALOGUE

1st edition EX72.01

*This catalogue shows the product in the most standard configurations.
Please contact our Sales Dpt. for more detailed information or special requests.*

WARNING!

*All specifications of this catalogue refer to the standard product at this date.
Walvoil, oriented to a continuous improvement, reserves the right to
discontinue, modify or revise the specifications, without notice.*

**WALVOIL IS NOT RESPONSIBLE FOR ANY DAMAGE CAUSED BY AN
INCORRECT USE OF THE PRODUCT.**

PATENTED SYSTEM

All the control valves belonging to the EX family work according to a principle designed by Hydrocontrol's R&D department and covered by patents EP1860327 (A1) EP1860327 (B1) US2008282691 (A1) and US7581487 (B2).

The valve LS signal is managed according to innovative technique which is an absolute first in the flow sharing world, ensuring:

- elimination of any LS signal bleed off, which can be observed in most systems currently available commercially, and is often the cause of poor compensation accuracy, slow response and excessive sensitivity to operating conditions.
- LS signal picking downstream of the local compensator: this will make signal detection "neater" improving control efficiency and accuracy.

RESPONSE RATE

The EX control valve's strength resides in its quick, prompt response, achieved thanks to the functional advantages built into our patented system. Even the most critical applications such as excavator bucket shacking and the swift dynamics of forestry machinery, usually hard to achieve on flow sharing systems, can be successfully implemented by using EX family products.

ACCURACY AND STABILITY

The unique technical characteristics of the Hydrocontrol's patent allows for outstanding flow control and compensation precision, not likely to be affected even by the most diverse operating conditions. Simultaneous functions are never mutually influenced, not even in the presence of the same load factors (an aspect best highlighted in crawler machinery travelling). System stability itself is greatly benefited by the EX design; the system, also in combination with traditional overcenter valves, appears well balanced and able to effectively reduce oscillation and dynamic instability.

EFFICIENCY

In addition to the well known advantages typically offered by flow sharing systems which, associated with a variable pump, will drastically reduce the machine operating consumption, the EX family introduces a number of interesting options, including pressure relief on the LS signal to further increase energy saving and guarantee top efficiency levels.

FLEXIBILITY

The EX family control valves can be easily adjusted to a variety of applications, thanks to the wide range of available options and different types of available control systems.

COMPACT DIMENSIONS

The carefully designed features and integrated electrohydraulic control ensure a highly compact and optimised layout. Integrated end plates are available in the final working section (only EX54 and EX72), adding to the system dimensional and functional efficiency.

PRIORITY

The EX family allow to install side by side pre-compensated section with post-compensated section. This feature allow to establish a priority in the way the oil is directed and increase the number of application where the EX family can be applied solving technical difficulties that before required external components. Both Inlets and Outlets remain common for the pre and post compensated sections making the assembling of the valve particularly convenient.

APPLICATIONS

Flow Sharing valve for 450 l/min inlet flow rate. Suitable application include drilling machines, wheeled loaders, telescoping cranes, marine cranes, mining and off-shore equipment.

Polyglycol-based aqueous solution HFC	-10	+60	NBR

For special applications and different fluids, please call our Technical Department.

Operating principle

The flow sharing technology applied to the standard load sensing system characterizes the new control valves EX. The valve, completely pressure compensated, guarantees great controllability to all actuations, making workport flow dependent only on metering area (spool position). When flow saturation occurs the system reacts by implementing an equal reduction of pressure margin across all spools, generating a proportional reduction of workport flow.

LEGEND:

1. Inlet line (High pressure)
2. Metering notches
3. Load sensing line
4. Local compensator
5. Metering spool

Single section

Referring to picture it's possible to remark some aspects of system functionality. Coming from the common inlet line the main flow, passing across the metering area, reaches local compensator. Metering area, according to the pressure margin, controls the total amount of flow to the workport selected by the main spool. The load sensing signal, picked up downstream the local compensator, feeds the common load-sensing line. When a single section is actuated, the local compensator fully opens to the left side, reaching its complete balanced position. The control of the LS system is made by the inlet compensator for fixed displacement pump or pump compensator for variable displacement pump.

Multi-section

When two or more sections are actuated only one, characterized by the highest pressure (dominant), is involved in the LS signal transmission, working as briefly described in the previous paragraph. The other functions (slaves) become directly dependent on it. The common LS line transfers the information coming from the dominant local compensator to all dependent compensators. Driven by the LS signal, the unbalanced slave compensators activate the pressure compensation creating an artificial pressure drop able to keep pressure margin nominally the same on all the spools. Workport flow becomes only a function of metering area making the system totally load independent.

Flow Sharing function

When saturation occurs the total amount of flow required by actuations is higher than the maximum pump flow rate. The system is able to keep the nominal pressure margin no more. The actual pressure margin reduces according to real flow demand. Since all the local compensators feel the same LS signal and the same pressure drop is applied to different metering areas, then workport flows are reduced proportionally in order to keep all actuations completely under control.

HYDRAULIC SCHEMA

Post compensated system - Electrohydraulic actuation

Post compensated system - Hydraulic actuation

(A - B)					1" MA-UNC	S35-S36

**Tie-rod kit classification**

Tie rod kit allows the correct assembly of sectional valves. Tie rod's length depends on the number of sections; each valve is assembled with tie rod kits including a tie rod, nut and washer. EX72 requires 3 tie-rod kits

Tie rod kit	Order Code	Lenght (mm)	Clamping Torque (Nm)	Quantity

	C24DE	413172440	24	28					
AMP JUNIOR	C12AJ	413171237	12 Vdc	7					
	C24AJ	413172433	24 Vdc	28					

NOTE: mating connector for DIN 43650 can be ordered separately with code 413000313.

Inlet body classification

The inlet section with KV configuration enables control valve usage with fixed displacement pumps. With this configuration the presence of LS relief valve (valve type 1) is suitable to adjust the system maximum pressure. The inlet section with JV configuration enables control valve usage with variable displacement pumps. With this configuration the presence of LS relief valve (valve type 1) is suitable to adjust the system maximum pressure. LS electric dump valve (valve type 11) can also be added as safety device. An additional full flow relief valve (valve type 3) can be added to protect the system from pump regulator failures. Additional solution for variable displacement pumps is available on request to allow a constant reduced free flow in stand by condition through the system: this is sometime required to guarantee a stand by flow for oil cooling.

INLET BODY ARRANGEMENT AND THREAD AVAILABLE		
code	schema	description
KV S37		Open centre inlet section for fixed displacement pumps
KV S38		
JV S37		Closed centre inlet section for variable displacement pumps
JV S38		
KVR S37		Open centre inlet section with RDP for fixed displacement pumps
KVR S38		
JVR S37		Closed centre inlet section with RDP for variable displacement pumps
JVR S38		

NOTE:

Electrohydraulic actuation requires inlet section with RDP.

Transformation of the inlet section from closed center to open center and vice versa is possible by ordering the appropriate kit 320095003 or 320095004 (see page 18)

**Trasformation kits**

Transformation on the inlet section from open center to closed center is possible by ordering the complete kit code:
320095003 (transformation kit from KV to JV)

OPEN CENTER CONFIGURATION (JV) - VARIABLE PUMP

EX72 work sections are available in one configuration: POST COMPENSATED

- RIF. A = spool actuation side A / RIF. B = Spool return action side B

Sections designed with electrohydraulic actuation require double choice on side A and side B

- Leave out the spool return action code when choosing hydraulic actuation HP05A, HP05C and HP05L

- Sections designed to house auxiliary valve option require double choice on work ports A and port B.

Always indicate setting value when using antishock and pilot combined valve: 01 PA (120) - 04 PA (120)

- When ordering a section with electrohydraulic actuation, it is necessary to specify connector type. (see table on page 27).

**Spool identification**

Each work section contains a spool; each spool is compatible with all actuators.
For the correct operation of all actuators, each work section requires a spool end which changes according to the type of actuators. (see tables "C" on page 21)

POST - COMPENSATED SECTION		
Code	Description	Schema
W001C	3 positions double-acting	
W002C	3 positions double-acting A and B to tank	

Spool flow

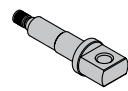

Flow rates delivered to the A and B ports are identified in following table. Rated flows refer to symmetrical spools.

POST - COMPENSATED SECTION (FLOW RATES l/min)					
Spool type	160160	200200	250250	280280	340340
W001C	•	•	•	•	•
W002C	•	•	•	•	•

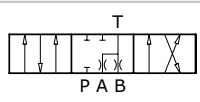

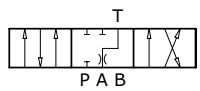

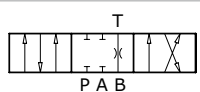

Spool end identification

All work section contain end spool, that changes as a function of spool actuation control.

POST - COMPENSATED SECTION

K10	A IN T	0,10	2,19	
Y10	B IN T	0,10	2,19	

Classification spool example

		W001C - 200200 - J10
W001C	3 positions double-acting	
200	Flow on port A	
200	Flow on port B	
J10	restriction on diameter (0,10 mm in A and B)	

NOTE:

- not simmetric spools (such as 160200, 250280...) are available on request; for availability we suggest to contact our Sales department.
- rated flows are defined for 16 bar ΔP (as per KV inlet arrangement); for different ΔP values on variable pump systems, refer to diagram on page 12 (Post compensated spool flow with variable displacement pumps).

**Spool actuation classification - SIDE A**

Spool actuations are divided in two types: **Hydraulic actuation - Electrohydraulic actuation**

**COMPLETE HYDRAULIC ACTUATION**

Code	Description	Dimensions	Configuration
HP05A	Hydraulic actuation (pilot ports on the top) (only with manual and hydraulic section body)		
HP05C	Hydraulic actuation (pilot ports on the sides) (only with manual and hydraulic section body)		
HP05L	Hydraulic actuation with stroke limiter (only with manual and hydraulic section body)		

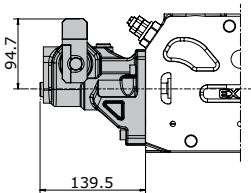

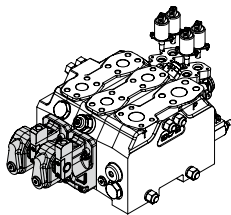

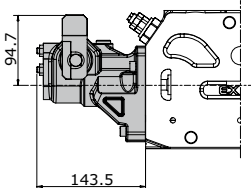

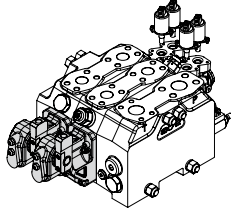

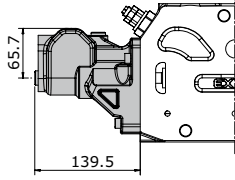

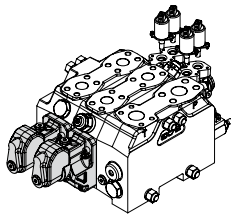

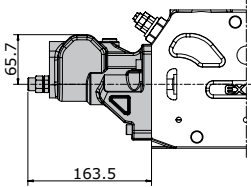

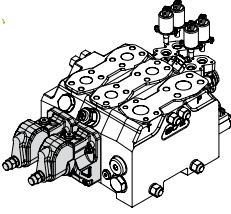

HYDRAULIC ACTUATION SPECIFICATIONS

Regulating pressure (bar)	6,2 - 20,1
Max Pressure on pilot line (bar)	40
Max Pressure on pilot Tank line (bar)	5

NOTE:

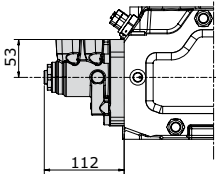

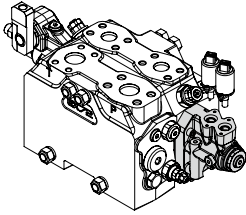

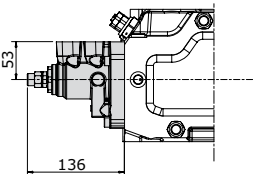

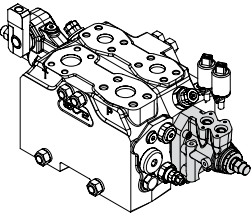

- Leave out the spool return action code when choosing hydraulic actuation HP05A, HP05C and HP05L
- HP05A, HP05C, HP05L requires a hydraulic version body.
- All hydraulics actuation are available in BSP or UNF version: (Port Pilot: 1/4" BSP or 9/16" UNF)
- Recommended control curve for HC Remote Control: A01 for standard spool

ELECTROHYDRAULIC ACTUATION - SIDE A			
Code	Description	Dimensions	Configuration
HP04	Lever actuation + electrohydraulic actuation		
HP04L	Lever actuation + electrohydraulic actuation with stroke limiter		
HP07	Without lever + electrohydraulic actuation		
HP07L	Without lever + electrohydraulic actuation with stroke limiter		

NOTE: Require electrohydraulic version body.

**Spools return action classification - SIDE B**

ELECTROHYDRAULIC ACTUATION - SIDE B			
Code	Description	Dimensions	Configuration
FP04	Lever actuation + electrohydraulic actuation available with HP04 - HP04L - HP07		
FP04L	Lever actuation + electrohydraulic actuation with stroke limiter Only available with HP07L		

Solenoid specifications for Electrohydraulic actuation

Solenoid kit must be ordered separately. Each work section require two solenoid kit.

Mating connector for Deutsch DT 4 can be ordered separately with code 5CON140031.

Compatibility table

COMBINATION		SPOOL ACTION AND RETURN SPRING TYPE - SIDE B	
		FP04	FP04L
SPOOL ACTION AND RETURN SPRING TYPE - SIDE A	HP05A		
	HP05C		
	HP05L		
	HP04	•	
	HP04L	•	
	HP07	•	
	HP07L		•

NOTE: Leave out the spool return action code when choosing hydraulic actuation HP05A, HP05C and HP05L

Work section arrangement

Following pages are showing ordering code for post compensated section in their standard version and in combination with some specific applicable devices.

POST-COMPENSATED Section with local LS relief valve

Another feature not commonly found in flow sharing systems is the possibility to have a Load Sensing relief valve on individual sections. The purpose to use a local LS relief instead of a standard port shock relief is to improve the efficiency of the system. When a standard port shock relief is used, the full flow across the relief will be directed to tank, if the pressure system exceeds the setting. By using a local LS relief, only a very minimal part of oil will be directed to tank in the same condition, with great advantage for the system efficiency.

Furthermore, by saving oil from going to tank, more oil will be available for simultaneous operations and this will improve the performance of the machine.

The pressure limitation generated by the local LS relief applies to both section ports, A and B.

The local pressure limitation works properly if the section is actuated alone or if the section is the most charged.

The local LS relief can be easily installed as a retrofit too.

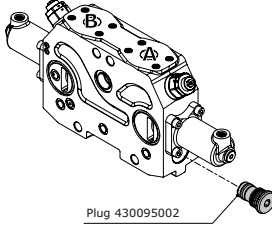

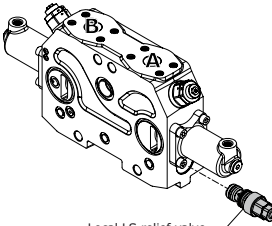

Functions	Code	Setting range	Type	POST compensated
Standard section	RC1		with auxiliary valve	•
Section with local LS relief valve	RCD1	<div>71 - 180</div> <div>181 - 280</div> <div>281 - 350</div> <div>351 - 420</div>	with auxiliary valve	•
Standard integrated outlet section	RCK1A RCK1C		with auxiliary valve	•
Integrated outlet section with local LS relief valve	RCDK1A RCDK1C	<div>71 - 180</div> <div>181 - 280</div> <div>281 - 350</div> <div>351 - 420</div>	with auxiliary valve	•

NOTE:

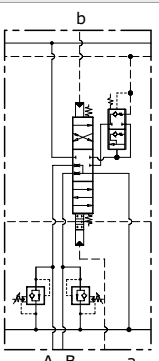

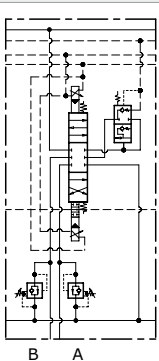

- Local LS relief valve work on both ports; setting for A and B ports is the same.
- LS relief valve setting must be specified as follow: RCD1 S35 (120) - RCDK1A S35 (120)

**Work section trasformation kits**

Transformation on the work section from RC type to RCD type and viceversa, is possible by ordering the following plug kit codes:

Type	Order Code	Setting Range	Description	Configuration	Section Type
RC	430095002		Standard section		Post compensated section
RCD	915029506	71 - 180	Section with local LS relief valve		
	915029503	181 - 280			
	915029504	281 - 350			
	915029505	350 - 420			

POST compensated arrangement**POST-COMPENSATED SECTION STANDARD**

code	schema for hydraulic lever actuation	schema for electrohydraulic actuation	description
RC1 S35			POST compensated section Arranged for auxiliary valves
RC1 S36			

POST-COMPENSATED SECTION WITH LOCAL LS RELIEF VALVE

code	schema for hydraulic lever actuation	schema for electrohydraulic actuation	description
RCD1 S35			POST compensated section with local Load Sensing relief valve Arranged for auxiliary valves
RCD1 S36			

Auxiliary valve identification

Valve setting is defined at 10 l/min flow. Look at Auxiliary valves diagram on page 14 to evaluate setting at actual flow.

code	description	schema	configuration	setting range (bar)			
				type	at full flow	type	at min. flow
01 PA	Antishock valve (port A)			A	60 / 100	A	10-A / 60-A
				B	101 / 160	B	61-A / 130-A
				C	161 / 250	C	131-A / 250-A
02 PA	Anticavitation valve (port A)						
04 PA	Pilot combined valve (port A)			A	50 / 390		
05 PA	Prearrangement for auxiliary valve (port A)						

code	description	schema	configuration	setting range (bar)			
				type	at full flow	type	at min. flow
01 PB	Antishock valve (port B)			A	60 / 100	A	10-A / 60-A
				B	101 / 160	B	61-A / 130-A
				C	161 / 250	C	131-A / 250-A
02 PB	Anticavitation valve (port B)						
04 PB	Pilot combined valve (port B)			A	50 / 390		
05 PB	Prearrangement for auxiliary valve (port B)						

Auxiliary valve - Setting range

Sections designed to house auxiliary valve option require double choice on work ports A and B.
Always indicate setting value when using antishock valve or pilot combined valve:

01 PA (120) = setting at full flow / 01 PA (120-A) = setting at min. flow

04 PA (120) = setting at full flow / 04 PA (120-A) = setting at min. flow

**INTEGRATED OUTLET SECTION**

Order example:

	W001C 200200	HP05A	RCK1A S35	05 PA	05 PB
1. W001C 200200	spool type _____				
2. HP05A	spool actuation type _____				
3. RCK1A S35	integrated outlet section type _____				
4. 05 PA	auxiliary valve type (port A) _____				
5. 05 PB	auxiliary valve type (port B) _____				

Ref.	Code	Description	Page
1	W001C 200200	3 positions double-acting (200200 = l/min Spool flow)	20
	W002C 200200	3 positions double-acting A-B to tank (200200 = l/min Spool flow)	
2	HP05A	hydraulic actuation (pilot ports on the top)	22
	HP05C	hydraulic actuation (pilot ports on the side)	
3	RCK1A S35	Integrated outlet section - LS drain Upper (SAE 6000 1"1/4 MA)	33
	RCK1A S36	Integrated outlet section - LS drain Upper (SAE 6000 1"1/4 UNC)	
	RCDK1A S35	Integrated outlet section with LS relief valve - LS drain Upper (SAE 6000 1"1/4 MA)	
	RCDK1A S36	Integrated outlet section with LS relief valve - LS drain Upper (SAE 6000 1"1/4 UNC)	
4	04 PA 90	Pilot combined valve (port A)	31
	05 PA	Prerangement for auxiliary valve (port A)	
5	04 PB 90	Pilot combined valve (port B)	31
	05 PB	Prerangement for auxiliary valve (port B)	

EX72 integrated outlet sections are available in one configuration: POST COMPENSATED

Integrated outlet sections are equipped with the same parts of work section, change only the body arrangement.

- RIF. A = spool actuation side A / RIF. B = Spool return action side B

Integrated outlet section designed with electrohydraulic actuation require double choice on side A and side B

- Leave out the spool return action code when choosing hydraulic actuation HP05A, HP05C and HP05L

- Sections designed to house auxiliary valve option require double choice on work ports A and port B.

Always indicate setting value when using antishock and pilot combined valve: 01 PA (120) - 04 PA (120)

- When ordering a integrated outlet section with electrohydraulic actuation, it is necessary to specify connector type. (see table on page 27).

INSTALLATION

Guidelines

- Never use the Control Valve at a pressure exceeding the rated pressure; if not, there is the possibility of breakage in the Control Valve;
- Use the Control Valve within the rated flow; if not there might be malfunction or a deterioration in heat balance. If it is unavoidable to use the Control Valve at a level exceeding the rated flow, carry out various confirmatory tests and use it within the verified range. If the Control Valve is used under a condition beyond the verified range, we shall not be responsible for any accidents occurred as a result of the use.
- Using low-cleanliness hydraulic fluid might cause seal failure or damage to the seal part, resulting in operation failure, or operation mistake of the machine; the customer is requested to check the cleanliness of the hydraulic fluid without fail.

Storage

Do not store the HC product in:

- Places where it might be damaged;
- Very hot/humid areas;
- Where it could get wet;
- Where it could come into contact with organic solvents, acids, alkalis and/or dangerous gases;
- In places subject to sudden, significant changes in temperature;
- only remove the packaging when you have decided to assemble the product.

Warning

- Hydrocontrol is not responsible for any damages due to a storage not in compliance with our prescriptions;
- For any doubts, please contact our aftersales department.

Installation procedures

On receiving the Hydrocontrol product make sure you:

- Check if there are some sign of damage of the packaging;
- Check that the dimensions of the product seat are compatible with those of the product itself;
- Check that assembly seat is compatible with the dimensions of the part and that it has been prepared for part set-up (connection hoses ready etc.);
- Remove the plastic caps that protect the service ports and be careful not to introduce any dirt or foreign matters inside the control valve as this could damage it;
- Mount the control valve securely to a flat surface (recommended 3 point fixing); at the time do not use a hammer to positioning by hitting; any distortion in assembly can result in spool sticking and poor control;
- Clean piping materials sufficiently before use;
- Prevent the port openings from being entered with dust or foreign matters;
- Double check that hoses are correctly connected following prescription and indication of hydraulic schema, especially:
 - (in case of EH control) be sure that drain line is directly connected to tank (avoid any back pressure)
 - (in case of variable displacement system) be sure that LS signal line is correctly connected to the pump regulator.
- tighten the port connectors surely with the recommended fastening torques (Nm) as shown in the following table;
- If possible, install the valve in a protected environment, avoiding direct exposure to weathering, water, salt or any other corrosion substances

INSTALLATION

**Warning**

- Falling or hitting the Control Valve might bend the Spool so as to cause an accident due to an operation failure;
- If the Control Valve is mounted in a uneven surface, the Control Valve Body might be deformed, which results on a malfunction or external leakage;
- If there are foreign matters in each port, the Control Valve operation might fail so as to cause an accident;
- Do not tighten fittings with torque more than the recommended value; If not there might be strains or damage to Control Valve so as to cause a serious accident;
- If the piping are not connected to the correspondent ports, unintentional movements might cause a serious accident;
- Hydrocontrol is not responsible for any damages due to an installation procedure not in compliance with our prescriptions;
- For any doubts, please contact our aftersales department.

Handling Precautions

When the Control Valve is handled, ensure:

- that you do not drop, hit or damage the product;
- that you do not hold the pilot cover or return spring cap of the spool or accessory valves such as main relief valves and anti-shock relief valves

Handling Precautions

Disassembly and assembly should be carried out by Hydrocontrol technicians. If the Control Valve doesn't work in the adequate way, we advise you to contact our aftersales department. However if the disassembly and assembly operations are strictly unavoidable, you must observe the following prescriptions and charge the carrying out of the operations to technicians high qualified in hydraulic field.

- The Control Valve reaches high temperature after operating the machine; start the work only after checking that the temperature is low;
- The valve can hold high internal pressure; release the inside pressure and ensure all machine actuators are in a rest position before removing the piping. In any case safely and carefully unscrew connections and fittings. If not, there might be a fall of attachments or high-temperature hydraulic fluid jet. Remind to wear the safety equipment and goggles;
- Pay attention in removing electrical connectors;
- Since hydraulic devices are all machined precisely with very accurate clearances, carry out the disassembly adassembly work at a clean place;
- Make sure to prevent the device form being entered with dust, sand and the like;
- Before removing the pipes, attach suitable indications on them to be able to locate their positions late. It is also advisable to label dismounted parts and write down their original location;
- Before disassembly work, get the assembly instructions by requiring to our aftersales department and prepare all the material needed for the task;
- To disassemble and assemble the valve observe strictly our mounting instructions;
- Since there is the possibility of rust when the disassembled parts are left, apply anticorrosive oil to the parts and seal them;
- If it is unavoidable to dismount spring kit from the spool, ensure to clamp the spool through plastic or aluminum devices;
- Before remounting the Control Valve on the operating machine, ensure that the Control Valve has not been affected by carrying out various hydraulic tests (e.g. Relief Valve setting, Leak test..);
- Before reassembling electrical connectors, verify their integrity and check if they are dry

**Warning**

- Always bear in mind that "all workers must act responsibly to ensure their own health and safety"; use of personal protection equipment is therefore essential. All the disassembly and assembly operations must observe strictly the procedures listed in the Hydrocontrol Mounting Instruction.
- Hydrocontrol is not responsible for any damages due to disassembly and assembly procedures not in compliance with our prescriptions.
- For any doubts, please contact our aftersales department.

General clamping torque

The following table provides the main tightening torques of the distributor EX72; are highlighted in 3 separate drawings depicting the inlet section, the working section and the integrated outlet section.

GENERAL CONDITIONS AND PATENTS

Product identification

All Hydrocontrol products have an identifying plate placed in specific position.

Serial number:

It univocally identifies the physical valve: this provides an easy way to find all sales and production details.

Product code:

It is a number univocally identifying the configuration and pressure settings of a valve.

Introduction

These general conditions apply to all general supplies from Hydrocontrol s.p.a., after receiving orders from the Customer. Should commercial terms such as EXW, DDP, etc be mentioned, of course the Incoterms of the International Chamber of Commerce must be referred to, according to the test existing when the general supply conditions are agreed on.

Management of orders

No Customer's order is binding to Hydrocontrol s.p.a. if Hydrocontrol s.p.a. has not confirmed the order in writing. Hydrocontrol s.p.a. commits to supplying the orders in compliance with the order confirmation that has been issued. Any disagreement with the content of the order confirmation must be communicated in writing to Hydrocontrol s.p.a. within and no later than 5 days from the delivery of the order confirmation. The Customer commits to paying for the goods supplied by Hydrocontrol s.p.a., according to the prices indicated on the order confirmation.

Payment conditions

The Parties agree on the payment terms at the beginning of the supply. The terms will be indicated on the order confirmation. Should the Customer be late with the payments, Hydrocontrol S.p.a. will be entitled to require the payment of interests on arrears based on the exiting Prime Rate increased by 2%. Should there be any payment delay, Hydrocontrol s.p.a. will be entitled not to process the Customer's purchase order, even if it has already been confirmed.

Delivery and shipment

The goods are always supplied Ex Works, even when Hydrocontrol s.p.a. agrees with the Customer that the shipment, or a part of it, will be arranged by Hydrocontrol s.p.a. It is agreed that the Customer will bear the risk of goods deterioration or damaging from the moment the goods are handed by Hydrocontrol s.p.a. to the first carrier.

Product characteristics

Hydrocontrol s.p.a. commits to supplying good quality products, compliant with the technical specifications declared on the technical tables and on the catalogue. Hydrocontrol s.p.a, even without notice, at its own discretion, reserves the right to modify the products as necessary, without these changes altering the main characteristics of the products.

Claims

Any claims about defects on delivered products (just as an example: claims about the packaging, the number, the quantity or the external product characteristics) will have to be notified to Hydrocontrol s.p.a. in writing, within and no later than 7 days from reception of the goods, otherwise the claims will be considered as null and void. Occult defects (the defects of the goods that cannot be spotted with a careful control of the goods received by the Customer), will have to be notified in writing to Hydrocontrol s.p.a. within 7 days from the discovery of the defect, and anyhow no later than 12 months from the delivery of the goods, otherwise the claim will be considered as null and void. Even in case of claim or objection, the Customer will never be entitled to suspend or delay the payments to Hydrocontrol s.p.a. for the products subject to claim or objection nor for any other supply.

**GENERAL CONDITIONS AND PATENTS****Warranty**

Should the products supplied by Hydrocontrol not be compliant or have the required quality and should this defect be due to Hydrocontrol, Hydrocontrol s.p.a. commits, at its choice, to replace or repair the faulty products, as long as the defect or lack of compliance is notified to Hydrocontrol s.p.a. in writing, as specified at point 6, within and no later than 12 months from product delivery. On the products that have been fixed or replaced in accordance with what specified above, the above-mentioned warranty applies. The 12 month duration starts from the date of repair or replacement. In case of defects, lack of quality or in case of lack of compliance for the supplied products, with the exception of fraud or serious offence, Hydrocontrol s.p.a. only commits to repairing or replacing the faulty products, according to what specified above. This warranty replaces any other Supplier's warranty or liability established by the law. This warranty excludes any other liability contractual or extra-contractual by Hydrocontrol s.p.a. on the products supplied by Hydrocontrol (as a mere example: damage refund, loss of profit, product recall campaign, etc). Hydrocontrol s.p.a. has signed a product civil liability police, with a suitable maximum coverage.

Ownership retention

The products supplied by Hydrocontrol s.p.a. will be owned by the latter until Hydrocontrol receives the complete payment for the supplied goods.

Obligation confidentiality

Hydrocontrol s.p.a. commits to not disclosing the technical and commercial information it receives from the Customer, unless this information has already been publicly disclosed.

Patents

The Customer is not allowed to use the provided Products, or a part of them, their descriptions or drawings protected or not protected by Patent or registered trademark in order to design or make similar products, unless Hydrocontrol s.p.a. previously issues its written authorization. Should Hydrocontrol s.p.a. give its written authorization, all patents, trademarks, registered designs, copyrights and intellectual property rights related or connected to the Products provided by Hydrocontrol s.p.a. will stay Hydrocontrol's property. The Customer commits to respecting the highest confidentiality.

Applicable law and court of jurisdiction

Hydrocontrol s.p.a.'s supplies are regulated by these General Supply Conditions and, for anything not defined here, by the Italian law. Any controversy related, generated or connected to the supply of Products by Hydrocontrol s.p.a., where Hydrocontrol s.p.a. is involved, will be exclusively dealt with by the Court of Bologna.
