**Additional information**

This catalogue shows the product in the most standard configurations.  
Please contact Sales Dpt. for more detailed information or special request.

**WARNING!**

All specifications of this catalogue refer to the standard product at this date.  
Walvoil, oriented to a continuous improvement, reserves the right to  
discontinue, modify or revise the specifications, without notice.

WALVOIL IS NOT RESPONSIBLE FOR ANY DAMAGE CAUSED BY AN  
INCORRECT USE OF THE PRODUCT.

8<sup>th</sup> edition December 2019

**The DPC Series**

The DPC Series is a family of open/closed center pre-pressure compensated sectional valves designed specifically for Mobile Applications. The DPC series provides exceptional controllability, efficiency and flexibility for applications requiring up to 240 l/min (63.4 US gpm) flow rate. DPC Series is available in two different sizes: DPC130 (DPC130X) and DPC200.

**DPC130****DPC130X****DPC200****The Load Sensing technology**

Thanks to the use of specially designed pumps and control valves, the Load Sensing principle can be considered the most comprehensive means of creating a flexible hydraulic circuit that can adapt to the various operating conditions demanded by users. The main feature of this principle is that the flow rate to the user is proportional to the spool position under any operating condition, regardless of the resistance encountered by the user (pressure) and the number of levers activated (exceeding the pump's total flow rate, a condition here in after defined as saturation, is the only limitation).

Therefore, with the LS systems, there is a specific correspondence between the position of the control lever and the movement speed of the user, cylinder or hydraulic motor. This feature is particularly useful in the hydraulic handling machine sector (excavators, cranes, loaders, agricultural and forestry machinery) in which each movement phase has specific sequences that the operator must control by using memorised movements.

**Advantages and options**

- Energy saving.
- Extension of part service life.
- Lower energy dissipation.
- Noise reduction.
- Available to create a single-pump circuit (compared with the use of multiple-pump circuits in which each pump is dedicated to different actuators to be operated simultaneously).

Real energy savings can be obtained above all when the DPC directional valves operate together with variable displacement Load Sensing pumps. When the DPC valve is utilised with fixed displacement pumps, the previously mentioned movement independence and repeatability features are guaranteed, but energy savings will be limited.

For special options please contact Sales Dept.

**The ATEX version**

The DPC130X is the DPC Series new valve built according to the ATEX directive for safe use in classified areas, with inflammable and potentially explosive materials.

Hydraulic features and performance remain the same of the DPC130 standard valve.

For more informations see code D1WWED03A catalogue.

**Working conditions**

This catalogue shows technical specifications and diagrams measured with mineral oil of  $46 \text{ mm}^2/\text{s}$  -  $46 \text{ cSt}$  viscosity at  $40^\circ\text{C}$  -  $104^\circ\text{F}$  temperature.

		<b>DPC130</b>	<b>DPC200</b>
Nominal flow rating (open center circuit)	on inlet port with compensator @ stand-by (margin pressure)	150 l/min - $39.6 \text{ US gpm}$ @ 9 bar - $131 \text{ ps}$	260 l/min - $68.7 \text{ US gpm}$ @ 11.5 bar - $167 \text{ ps}$
	on working ports with compensator ( $Q_{in}/Q_{ut} > 10\%$ ) @ stand-by (margin pressure)	100 l/min - $26.4 \text{ US gpm}$ @ 7 bar - $102 \text{ ps}$	200 l/min - $52.8 \text{ US gpm}$ @ 7 bar - $102 \text{ ps}$
	on working ports without compensator ( $Q_{in}/Q_{ut} > 10\%$ ) @ stand-by (margin pressure)	130 l/min - $34.3 \text{ US gpm}$ @ 9 bar - $131 \text{ ps}$	240 l/min - $63.4 \text{ US gpm}$ @ 11.5 bar - $167 \text{ ps}$

## Complete sections ordering codes

**1 Inlet section \*****page 12**

TYPE: <b>DPC130/BR-S200-DSK-SAE</b>	CODE: 63425H000
DESCRIPTION: With 3-way compensator, L.S. pressure relief valve, pressure reducing valve and selector for open/closed center circuit	
<b>Closed Center circuit</b>	
TYPE: <b>DPC130/BN21-S220-SAE</b>	CODE: 63422H001
DESCRIPTION: With secondary pressure control system and pressure reducing valve, with L.S. pressure relief valve.	
TYPE: <b>DPC130/BR21-S220-ELP-SAE-12VDC</b>	CODE: 63421H003
DESCRIPTION: As previous one, with pressure reducing valve, and 12VDC solenoid operated unloader valve	
TYPE: <b>DPC130/BRF21-S250-SAE</b>	CODE: 634250901
DESCRIPTION: With pressure reducing valve and L.S. pressure relief valve	
TYPE: <b>DPC130/BRSOG21(SF)-S220-ELN3-SAE-12VDC</b>	CODE: 63425H006
DESCRIPTION: Shut-off configuration, with pressure reducing valve and L.S. pressure relief valve	
TYPE: <b>DPC130/BRS21-S220-ELP-SAE-12VDC</b>	CODE: 63425H002
DESCRIPTION: Copy-Spool with dumper configuration, with secondary pressure control system, with pressure reducing valve, L.S. pressure relief valve and 12VDC solenoid operated unloader valve	
<b>Open Center circuit</b>	
TYPE: <b>DPC130/BN11-S220-SAE</b>	CODE: 63422H002
DESCRIPTION: With 3-way compensator and L.S. pressure relief valve, without pressure reducing valve	
TYPE: <b>DPC130/BR11-S220-ELP-SAE-12VDC</b>	CODE: 63421H004
DESCRIPTION: As previous one, with pressure reducing valve, and 12VDC solenoid operated unloader valve	
TYPE: <b>DPC130/BRS11-S220-ELP-SAE-12VDC</b>	CODE: 63425H004
DESCRIPTION: Copy-Spool with dumper configuration, with 3-way compensator, pressure reducing valve, L.S. pressure relief valve and 12VDC solenoid operated unloader valve	

**2 Working section \*****page 22****With 2-way compensator**

TYPE: **DPC130/C10-1S8EZ3TL1-SAE-12VDC** CODE: 63411H002  
DESCRIPTION: With double acting spool for 60 l/min (16 US gpm), proportional electrohydraulic control with lever

TYPE: **DPC130/C22-1S8EZ3TL1.UTUTSTST-SAE-12VDC**

CODE: 63411H004

DESCRIPTION: As previous one, arranged for port valves and L.S. relief valves

**Without compensator**

TYPE: **DPC130/D10-1S8EZ3TL1-SAE-12VDC** CODE: 63412H002  
DESCRIPTION: With double acting spool for 60 l/min (16 US gpm), proportional electrohydraulic control with lever

TYPE: **DPC130/D20-1S8EZ3TL1.UTUT-SAE-12VDC**

CODE: 63412H004

DESCRIPTION: As previous one, arranged for port valves

TYPE: **DPC130/CV10-1S8EZ3TL1-SAE-12VDC** CODE: 63413H002  
DESCRIPTION: With load check valve, double acting spool for 60 l/min (16 US gpm), proportional electrohydraulic control, with lever

TYPE: **DPC130/CV22-1S8EZ3TFL1.UTUTSTST-SAE-12VDC**

CODE: 63413H004

DESCRIPTION: With load check valve, double acting spool for 60 l/min (16 US gpm), proportional electrohydraulic control, with lever, arranged for port valves and L.S. relief valves

**3 Outlet section \*****page 49****For valve with mechanical control**

TYPE: **DPC130/RF10** CODE: 634310001

DESCRIPTION: Without ports

**For valve with hydraulic control**

TYPE: **DPC130/RF20** CODE: 634310024

DESCRIPTION: Without ports, internal drain

**For valve with electrohydraulic control**

TYPE: **DPC130/RF30-SAE** CODE: 634310003

DESCRIPTION: Without ports, L external drain

TYPE: **DPC130/RC31-SAE** CODE: 634310005

DESCRIPTION: With P1 and T1 (plugged) ports, L external drain

TYPE: **DPC130/RD31-SAE** CODE: 634310007

DESCRIPTION: With P1 and T1 ports (plugged), LS1 port, external drain L

**4 Valve threading**

Specify only if it is different from BSP standard (see page 5).

**5 Voltage**

Specify the voltage of electric device

**6 Pump stand-by**

This option must be specified only if valve is configured for Closed Center circuit, without local compensation and if the value is different from 9 bar (131 psi)

**7A Assembling kit****For valve with BR-BN-BRS-BRSO inlet sections**

CODE	DESCRIPTION
5TIR108185	For 1 working section valve
5TIR108232	For 2 working sections valve

Reduced pressure vs. Flow

#### Auxiliary port specification

V1 = SAE6 pilot pressure port ( $P_{max} = 30 \text{ bar} / 435 \text{ psi}$ ) for hydraulic pilot control valves feeding ( $P \Rightarrow OUT$ )

V2 = M14x1.5 pilot pressure port for:

- electrohydraulic controls optional feeding ( $P_{max} = 315 \text{ bar} / 4600 \text{ psi}$ ) ( $P \Rightarrow IN$ ); SAE6 joint is required, code 5GIU519612
- pressure gauge connection; SAE6 joint is required, code 5GIU620331.

#### Wrenches and tightening torque

E = allen wrench 4

F = wrench 17 - 24 Nm (17.7 lbft)

G = wrench 24 - 42 Nm (31 lbft)

K = allen wrench 5 - 24 Nm (17.7 lbft)

X = allen wrench 6 - 24 Nm (17.7 lbft)

Y = allen wrench 10 - 24 Nm (17.7 lbft)

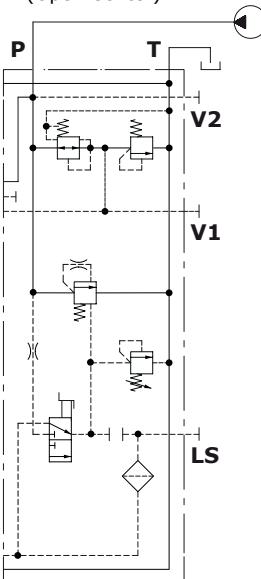

Z = wrench 19 - 24 Nm (17.7 lbft)

W = wrench 34 - 42 Nm (31 lbft)

NOTE: for relief valve and solenoid valve wrench and torque please see page 21.

#### BR-DSK type

(Open Center)

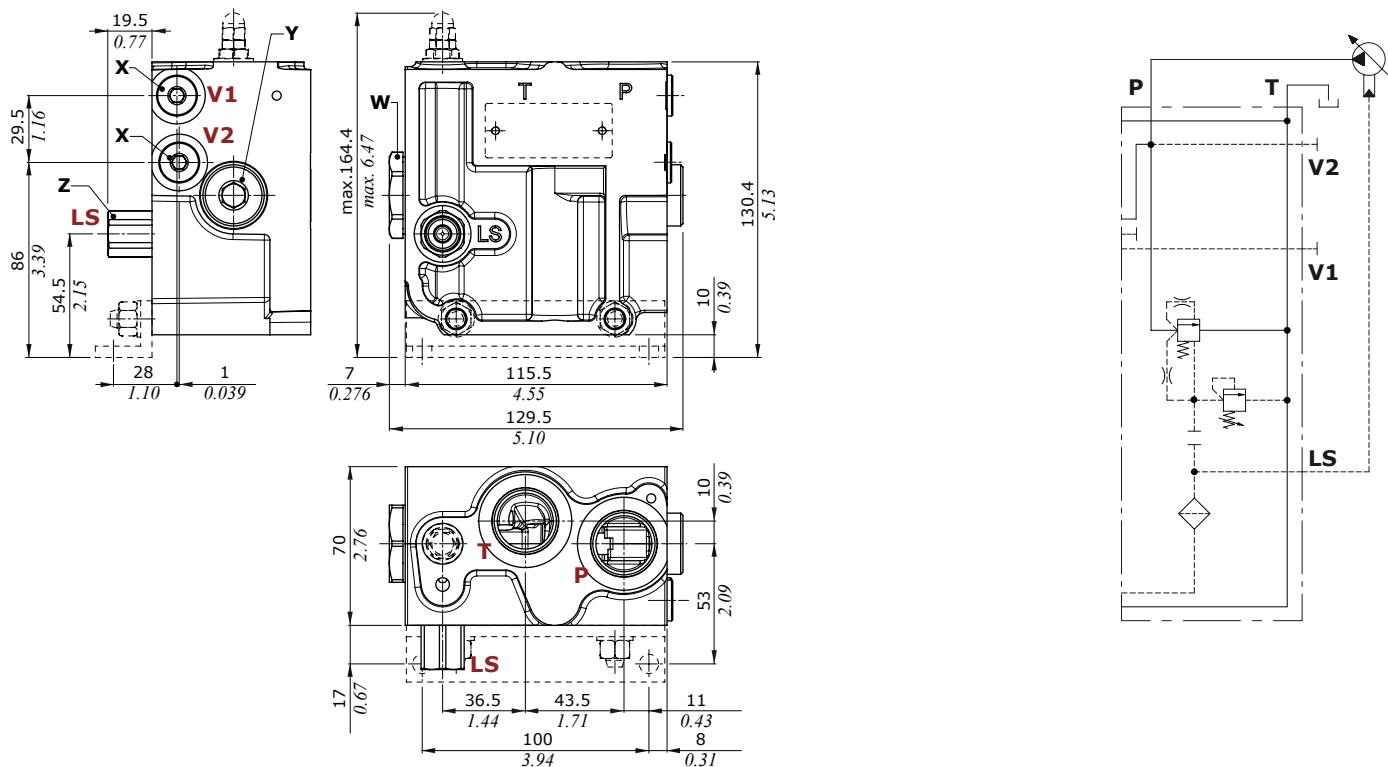

## Inlet section

## Dimensions and hydraulic circuit

## Standard inlet section for Closed Center circuit: BN21 type

Configuration without pressure reducing valve.

## Auxiliary port specification

**V1** = SAE6 pilot pressure port for electrohydraulic control feeding ( $P_{max} = 30 \text{ bar} - 435 \text{ psi}$ ) ( $P \Rightarrow IN$ )

**V2** = SAE6 pressure gauge connection

## Wrenches and tightening torque

X = allen wrench 6 - 24 Nm (17.7 lbf)

Y = allen wrench 10 - 24 Nm (17.7 lbf)

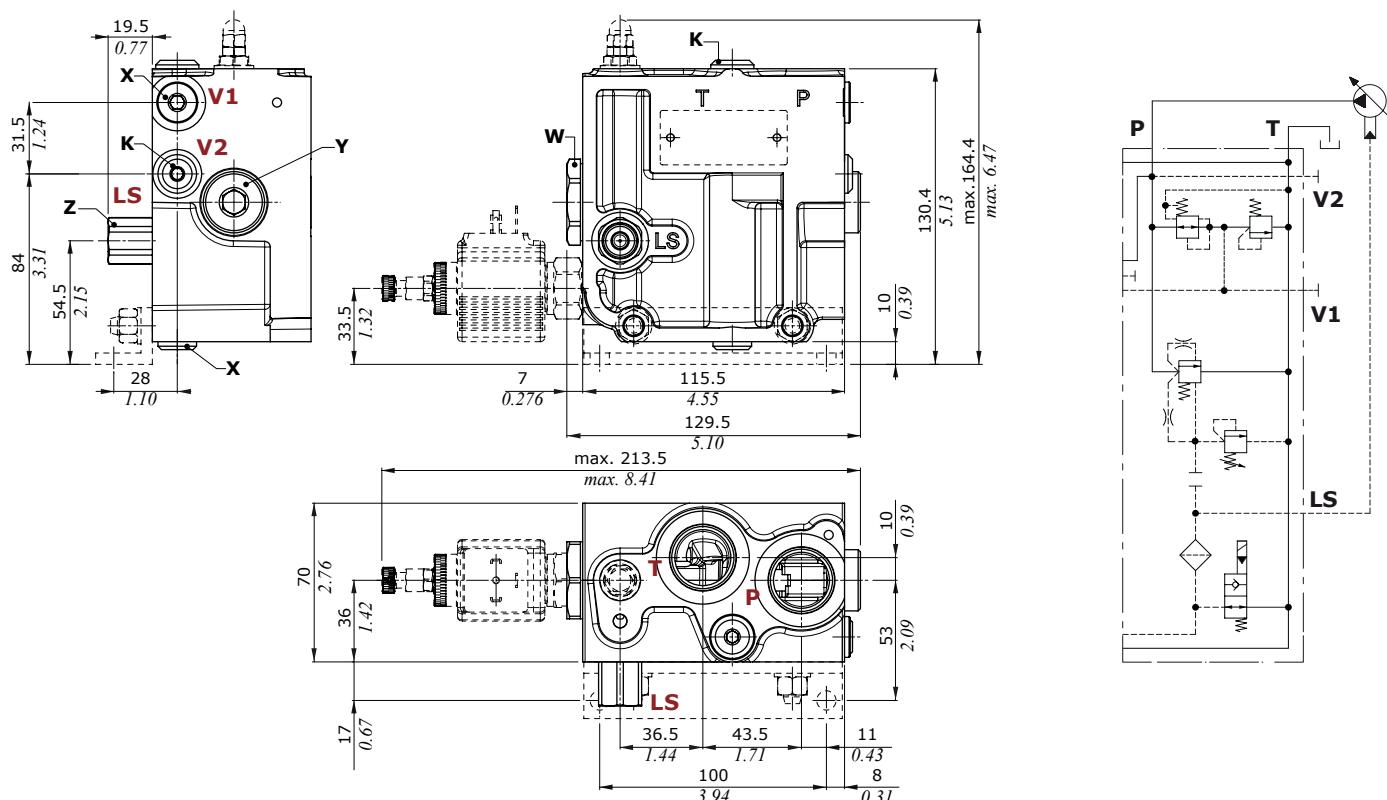

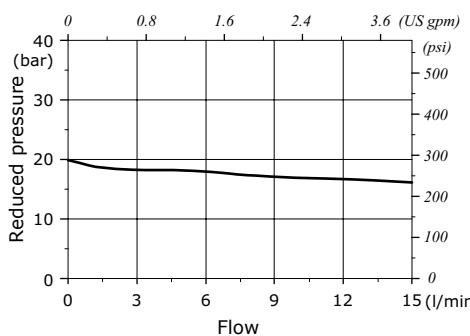

Z = wrench 19 - 24 Nm (17.7 lbf)

W = wrench 34 - 42 Nm (31 lbf)

NOTE: for relief valve wrench and torque please see page 21

## Inlet section

## L.S. pressure relief valve

Valve type	Dim. B	
	mm	in
LSD	21.5	0.85
LSH	17	0.67
LSZ	34	1.34

## Legenda

LSH: with lock arrangement  
 LSD: with blind nut  
 LSZ: with anti-tamper cap  
 ST: valve blanking plug

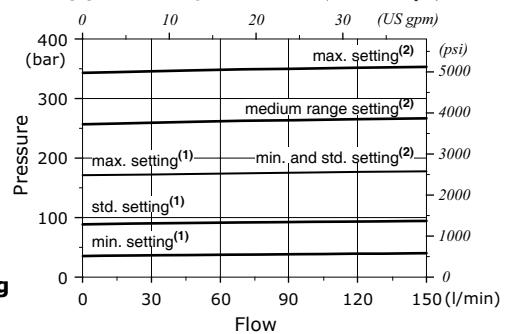

## Wrenches and tightening torques

X = wrench 13 - 24 Nm (17.7 lbf)  
 Y = wrench 10 - 9.8 Nm (7.2 lbf)  
 W = allen wrench 3  
 J = wrench 7 - 24 Nm (17.7 lbf)  
 K = allen wrench 5 - 24 Nm (17.7 lbf)

## Pressure vs. flow diagram

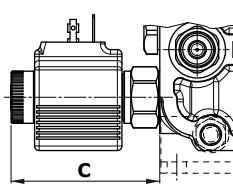

(1) = valve range 40-180 bar (580-2600 psi)

(2) = valve range 180-350 bar (2600-5000 psi)

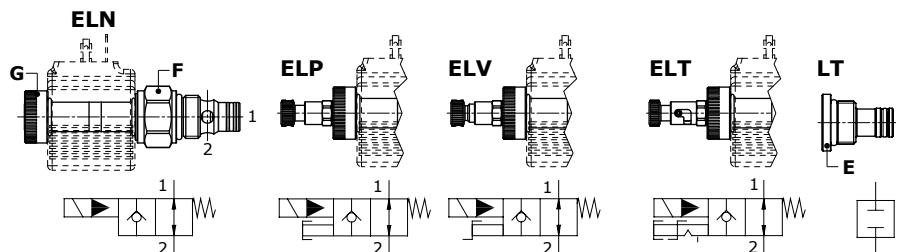

## Solenoid operated L.S. unloading valve

Available on BR and BRS inlet sections.

Valve type	Dim. C	
	mm	in
ELN	65.5	2.58
ELP	88.5	3.48
ELV	88.5	3.48
ELT	91	3.58

## Features

Max. flow ..... : 40 l/min (10.6 US gpm)  
 Max. pressure ..... : 380 bar (5500 psi)  
 Internal leakage ..... : 0.25 cm<sup>3</sup>/min @ 210 bar  
 (0.015 in<sup>3</sup>/min @ 3050 psi)

For coil features and BER type coil options please see page 83.

## Legenda

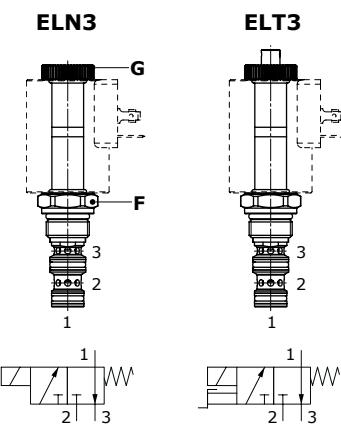

ELN: without emergency  
 ELP: push button emergency override  
 ELV: screw emergency override  
 ELT: "push&twist" emergency override  
 LT: valve blanking plug

## Wrenches and tightening torques

F = wrench 24 - 30 Nm (22 lbf)  
 G = manual tightening  
 E = wrench 10 - 24 Nm (17.7 lbf)

## Solenoid operated Shut-Off pilot valve

Available on BRSO inlet section

Valve type	Dim. A	
	mm	in
ELN3	65.5	2.58
ELT3	88.5	3.48

## Legenda

ELN3: without emergency  
 ELT3: screw emergency override

## Wrenches and tightening torques

F = wrench 24 - 30 Nm (22 lbf)  
 G = manual tightening

## Features

Max. flow ..... : 3 l/min (0.80 US gpm)  
 Max. pressure ..... : 350 bar (5100 psi)  
 Internal leakage ..... : 10 cm<sup>3</sup>/min @ 210 bar  
 (0.61 in<sup>3</sup>/min @ 3050 psi)

For coil features and BT type coil options please see page 84.

Following curves are detected with standard spools, connecting P⇒A⇒B⇒T and P⇒B⇒A⇒T ports without flow multiplication. Customized spools with backpressure or flow multiplication may require different force, pressure and pilot current for operation.

**Non-compensated working section**  
**Spool flow vs. Stand-by pressure (margin pressure)**

## Working section

### Pressure control spools

#### Introduction

The instability of the Load Sensing systems in certain applications, with 1/2 - 2 Hz frequency load oscillations, can cause serious operation control issues.

Critical applications are generally due to operations with a major inertia torque and/or functions with controlled secondary pressure components (counterbalance valves).

For example:

- rotation function
- main crane lifting/descent function.

#### Features

The pressure control spools are designed in such a way that the stroke controls the pump pressure.

The spool must be actuated until the pump pressure slightly exceeds the load pressure before the work function is applied. If the spool is kept in this position, the pump pressure will remain constant, even in case of load pressure changes, thus ensuring system stability.

Use of the pressure control spool, means as well:

- both the fluid flow and the dead band depend on the load
- a flow proportional to the  $\Delta P$  between the L.S. signal and the load on the port, which does not remain constant will be dispensed.
- the pressure drop through the main spool is due to vary (energy consumption).

Because of these factors, the pressure control spools must only be used when load instability issues are ascertained and in those applications where constant pressure is required such as Drilling Machines.

#### Application

The pressure control spools should only be used when load stability problems exist, as could occur during lifting/descent and rotation (with cylinders) operations of a crane.

For the lifting/descent operation a "single" type pressure control spool is best used. This type of spool is designed for normal flow control on the port used for lifting, and for pressure control on the port connected to the pilot signal of the counterbalance valve. An independent load lifting movement is thus obtained, as well as a dropping function which is stable but dependent on the load. In the rotation function, the load pressure is usually constant, irrespective of the fact whether the crane is loaded or not, and a spool must therefore be used with pressure control function on both ports A and B.

In both cases a working section with pressure compensator is required (C26 or C27 types).

Always make a point of using the L.S. pressure relief valves, which not only ensure individual pressure limitation but also allow adjusting the max flow to ports.

Any anti-shock valves must be set to 20% higher than the setting values of the L.S. pressure relief valves.

#### Limitation

The use of the pressure control spools therefore allows limiting oscillations and obtaining smooth and precise control of the function with the following limitations:

- the "non-adjustment" stroke of the spool (dead band) will depend on load conditions
- the working section of the control valve will lose the "load independent" characteristic
- pump pressure could exceed load pressure.

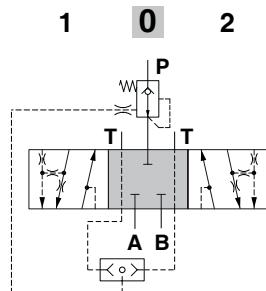

## Working section

## Spool stroke

position 1: + 7 mm (+ 0.28 in)  
position 2: - 7 mm (- 0.28 in)

## 2HPC2(D,V,Q) type spool

A, B partially to tank in neutral position

## Spool stroke

position 1: + 7 mm (+ 0.28 in)  
position 2: - 7 mm (- 0.28 in)

Flow vs Pressure curve  
Size Q (40/lmin - 10.6 US gpm) spool

## Sizing

## Example 1: how to determine the flow to ports

To know the flow to ports of a spool of known size, you need to know the setting pressure of the valve on the L.S. signal as well as the operating pressure.

As shown in the example, the spool is size D (25 l/min in flow control), the valve on the LS signal is calibrated at 210 bar - 3050 psi (zero flow to port with such load). Following the third parabola of the operating curve, it can be seen that with a load of 150 bar - 2200 psi we have 55 l/min - 14.5 US gpm on port.

## Example 2: how to determine the spool size

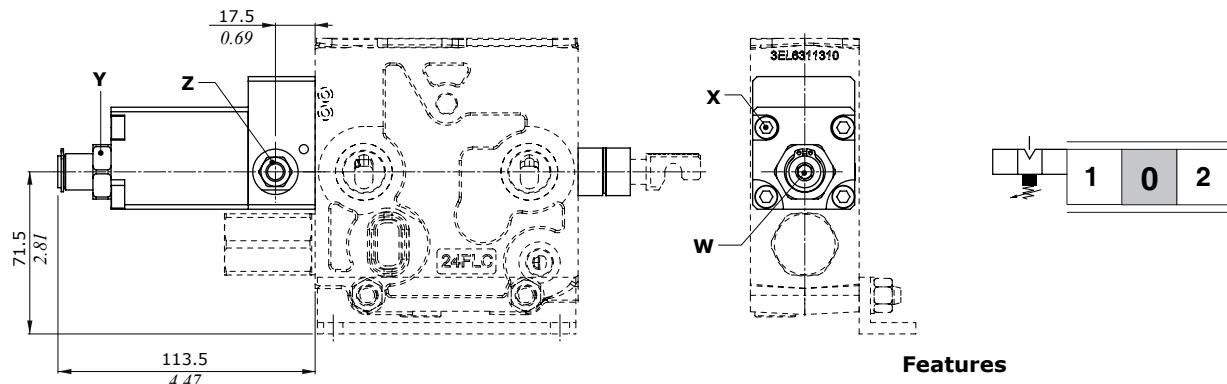

It is necessary to know the flow to port (e.g., 55 l/min - 14.5 US gpm), the setting pressure of the pressure relief valve on the L.S. signal (180 bar - 2600 psi) and the operating pressure (150 bar - 2200 psi).

Tracing the parabolas parallel to those entered in the characteristic curve graphs, in the spool type Q we obtain a curve that crosses the required points: 55 l/min at 150 bar - 14.5 US gpm and 0 l/min - US gpm at 180 bar - 2600 psi.

## Working section

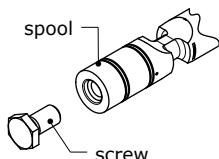

### "A" side spool control kit

#### With friction and center position feeling: 7FT type

#### NOTE: spool replacement

The spool for this control is to be selected from the list on page 23-24.  
To assemble the spool remove the screw (wrench 13) on spool back and trash it.  
Then clean the cavity from Loctite® residue.

#### Features

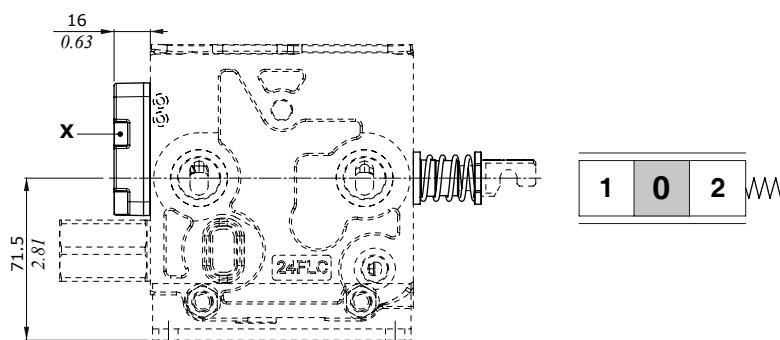

Friction load adjusting . . . : 20-150 N (4.5-34 lbf)  
Friction load std. setting . . : 100 N (22.5 lbf)  
Center tap (more than load) : 100 N (22.5 lbf)

#### Wrenches and tightening torque

X = allen wrench 5 - 9.8 Nm (7.2 lbf)  
Y = wrench 24 - 42 Nm (31 lbf)  
Z = wrench 13 - 24 Nm (17.7 lbf)  
W = allen wrench 6

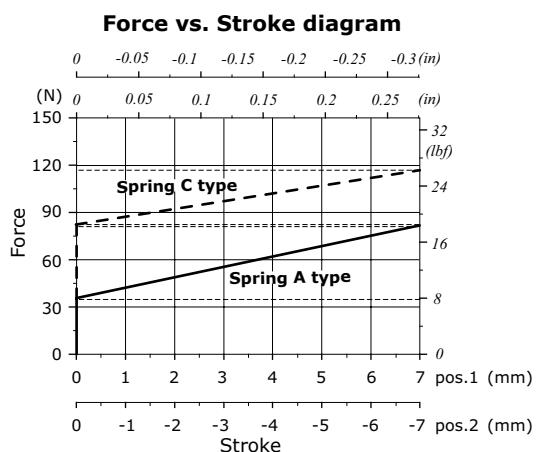

#### With spring return to neutral position: 8 type

It is supplied with standard spring type A (see force-stroke diagram); available with stronger spring type C (8MC code: 5V08230000).

#### Wrenches and tightening torque

X = allen wrench 5 - 9.8 Nm (7.2 lbf)

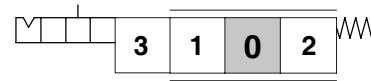

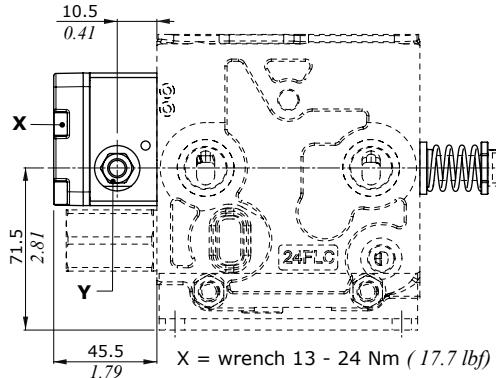

Spring A type = from 35.6 N (8 lbf) to 81.8 N (18.4 lbf)

Spring C type = from 82.3 N (18.5 lbf) to 116.8 N (26.3 lbf)

## Working section

**"A" side spool control kit****With detent in 4<sup>th</sup> position (pos.3), for floating circuit: 13 type**

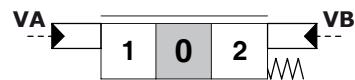

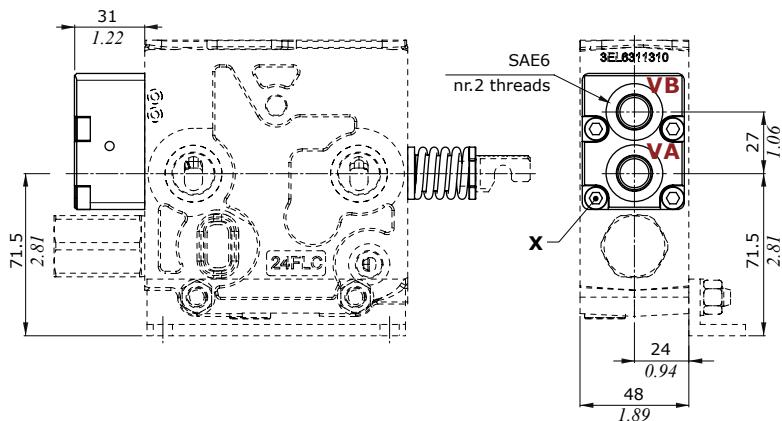

F, G or FV type working sections and floating circuit 5 type spool are requested for.

**Features**

Detent force ( $\pm 10\%$ ) . . . . . : 310 N (70 lbf)  
Release force ( $\pm 10\%$ ) . . . . . : 110 N (24.7 lbf)

**Features**

Max. flow . . . . . : 40 l/min (10.6 US gpm)  
 Max. pressure . . . . . : 380 bar (5500 psi)  
 Internal leakage . . . . . : 0.25 cm<sup>3</sup>/min @ 210 bar  
 (0.015 in<sup>3</sup>/min @ 3050 psi)

For coil features and BER type coil options please see page 83.

**Legenda**

- LSTN(NA): without emergency
- LSTP(NA): push button emergency override
- LSTV(NA): screw emergency override
- LSTT(NA): "push&twist" emergency override
- LSTN(NC): without emergency
- LSTP(NC): pull button emergency override
- LSTV(NC): screw emergency override
- LSTT(NC): "pull&twist" emergency override
- LST3T: valve blanking plug (both valve seats)

**LST3T**

**Wrenches and tightening torques**

F = wrench 24 - 30 Nm (22 lbf)

G = manual tightening

E = wrench 10 - 24 Nm (17.7 lbf)

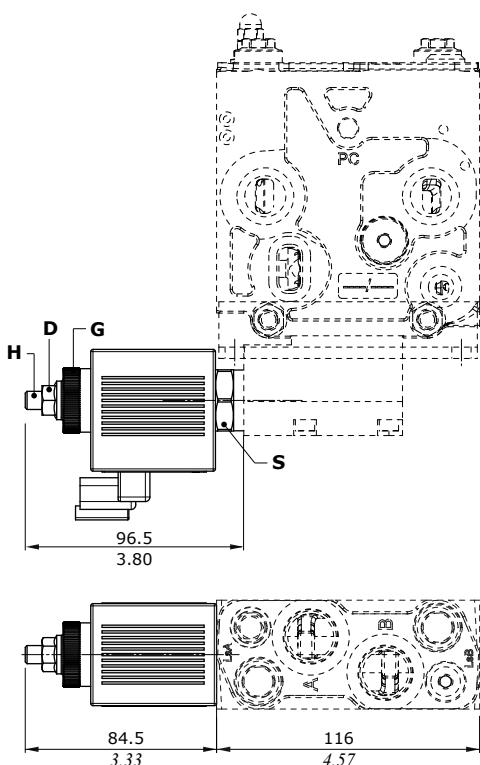

## Working section

### Proportional solenoid operated L.S. unloading valves

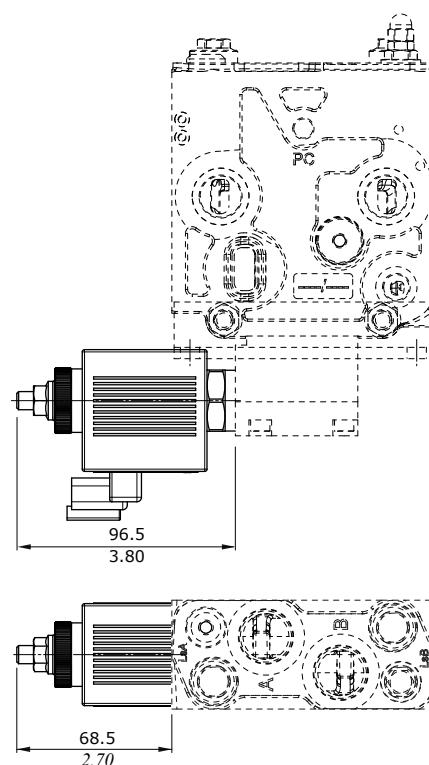

Only available on C27SA and C27SB sections.

The valve is always supplied with coil.

On C27SA section

On C27SB section

#### Wrenches and tightening torques

S = wrench 27 - 50 Nm (36.9 lb/ft)

D = wrench 13 - 15 Nm (11.1 lb/ft)

H = allen wrench 4

G = manual tightening

#### Features

Max. flow . . . . . : 3 l/min (0.79 US gpm)

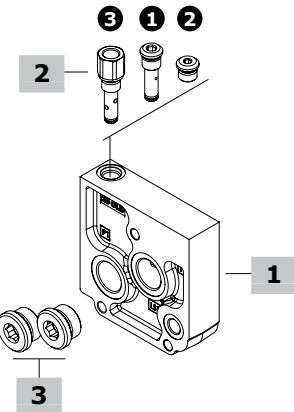

Max. pressure. . . . . : 350 bar (5100 psi)

Internal leakage . . . . . : 0.25 cm<sup>3</sup>/min (0.015 in<sup>3</sup>/min)

@ 80% max pressure setting

For coil features and **BOP19** type coil options please see page 83.

**7 Section threading**

Specify threading only if it is different from BSP standard. For valve with SAE J518-code 61 flange connection digit: **FS3-U(SAE)**, only **FS3-U** for **C10** type.

**8 Plug for single acting spool\***

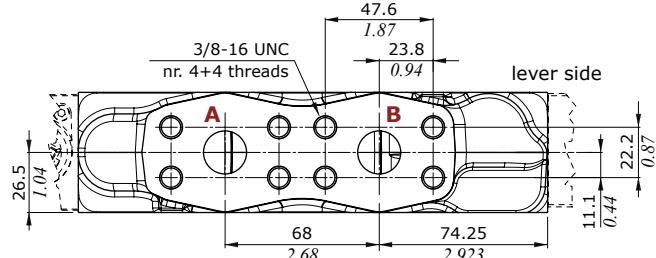

CODE	DESCRIPTION
3XTAP838200	SAE16 plug
4FL1066181	3/4" blind flange

**Working section****Dimensions and hydraulic circuit****Without port valves****LS bottom port position****Wrenches and tightening torques**

X = allen wrench 12 - 90 Nm (66 lbf)

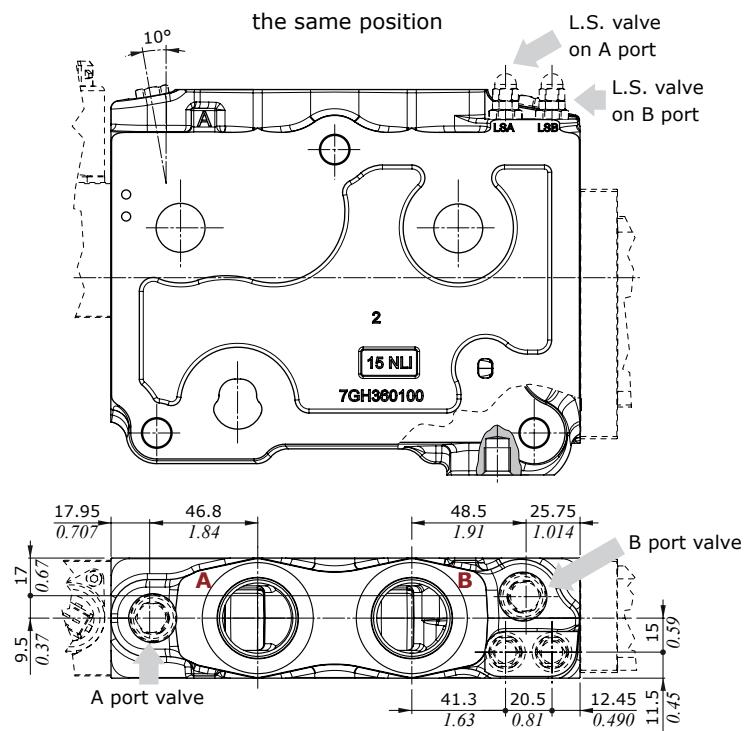

Y = allen wrench 17 - 90 Nm (66 lbf)

Z = allen wrench 6 - 24 Nm (17.7 lbf)

**FS3-U(BSP) optional connection****With port valves**

'U' and 'UL' size valves have

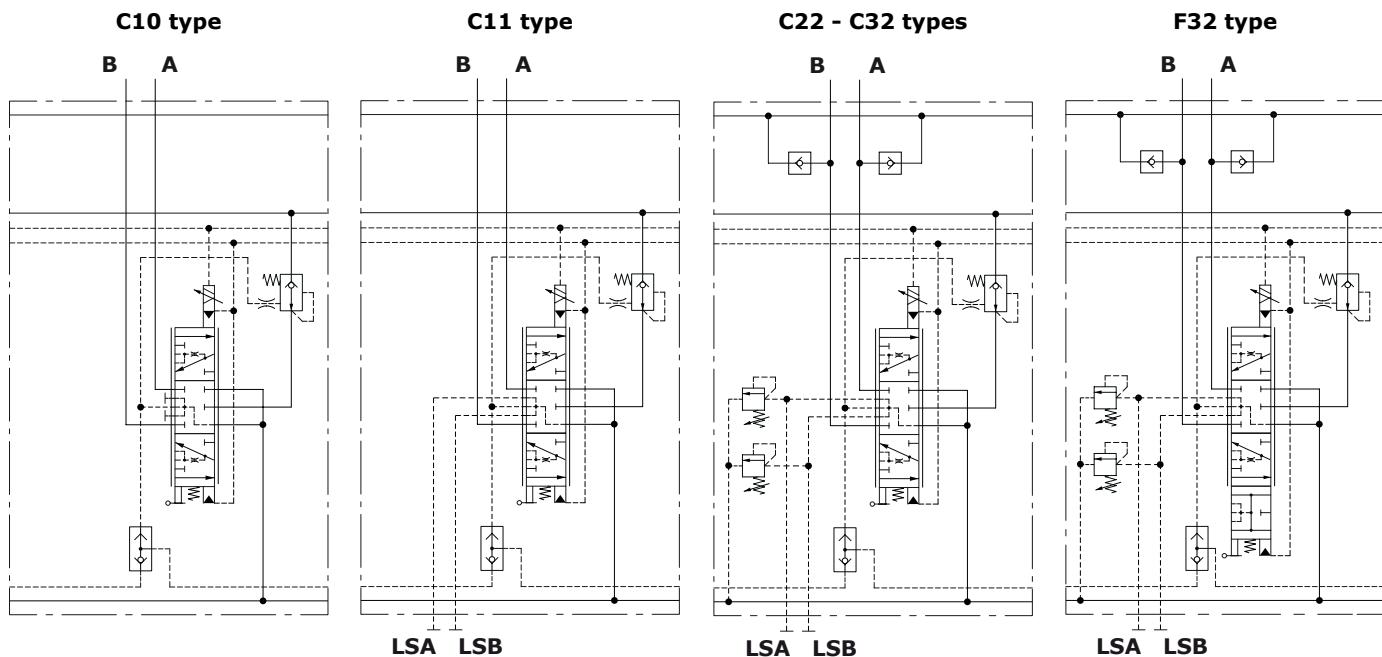

the same position

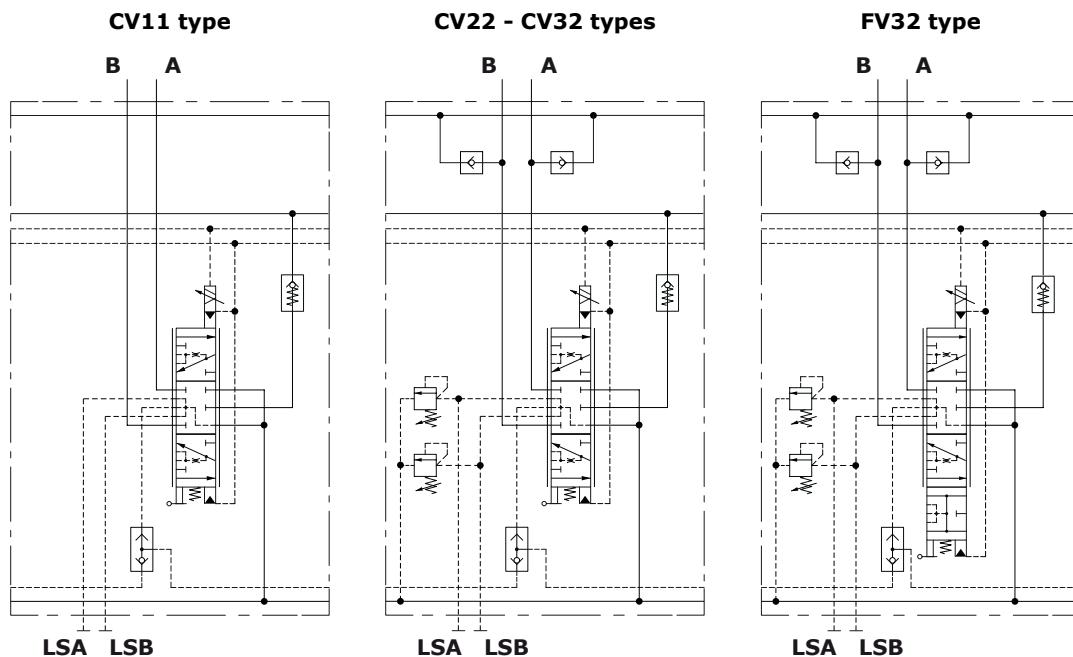

## Working section

## Dimensions and hydraulic circuit

## With compensator

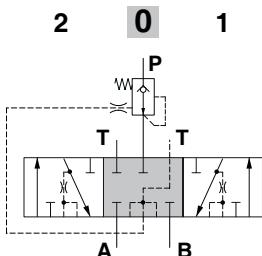

## Without compensator, with check valve

**Working section****Spools****1 type spool**

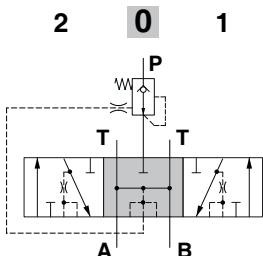

A, B closed in neutral position

**Spool stroke**

position 1: - 8 mm (- 0.31 in)  
 position 2: + 8 mm (+ 0.31 in)

**2 type spool**

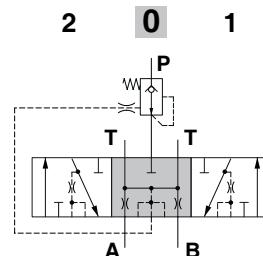

A, B open to tank in neutral pos.

**Spool stroke**

position 1: - 8 mm (- 0.31 in)  
 position 2: + 8 mm (+ 0.31 in)

**2H type spool**

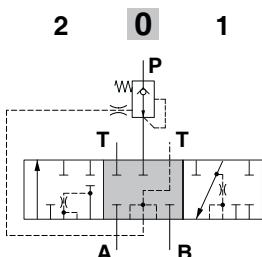

A, B partially to tank in neutral pos.

**Spool stroke**

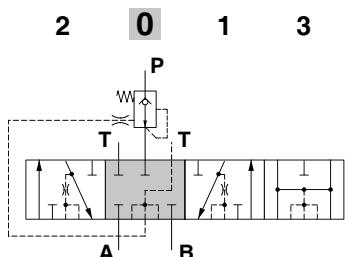

position 1: - 8 mm (- 0.31 in)  
 position 2: + 8 mm (+ 0.31 in)

**3 type spool**

single acting on A

**Spool stroke**

position 1: - 8 mm (- 0.31 in)  
 position 2: + 8 mm (+ 0.31 in)

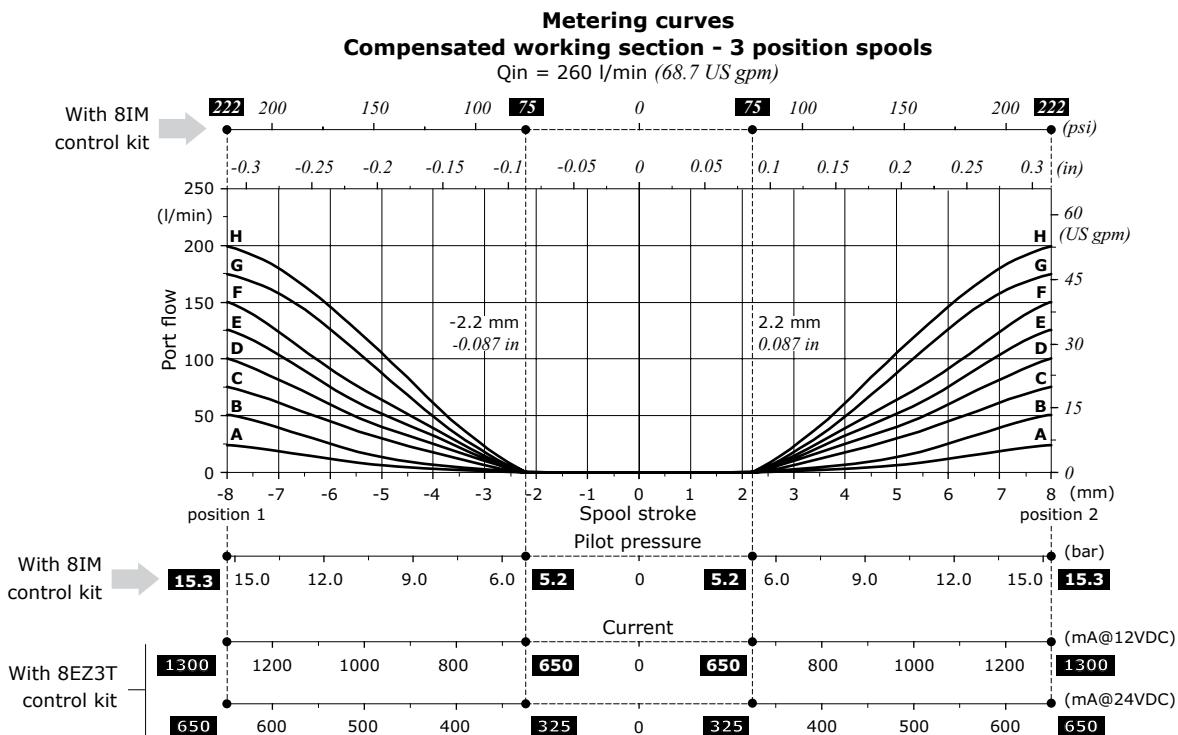

**5 type spool**floating in 4<sup>th</sup> position (pos.3)**Spool stroke**

position 1: - 8 mm (- 0.31 in)  
 position 2: + 8 mm (+ 0.31 in)  
 position 3: - 13 mm (- 0.51 in)

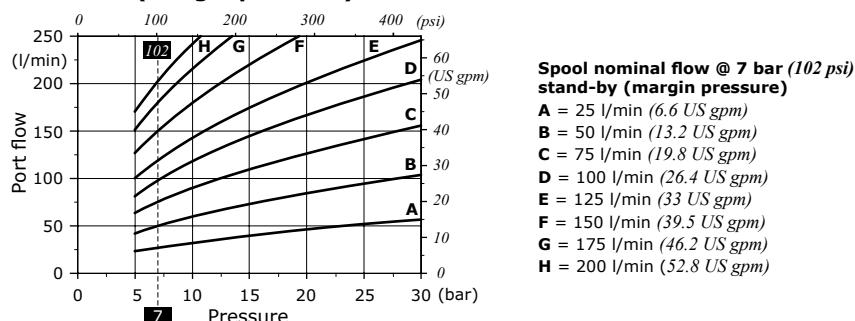

**Working section****Spools**

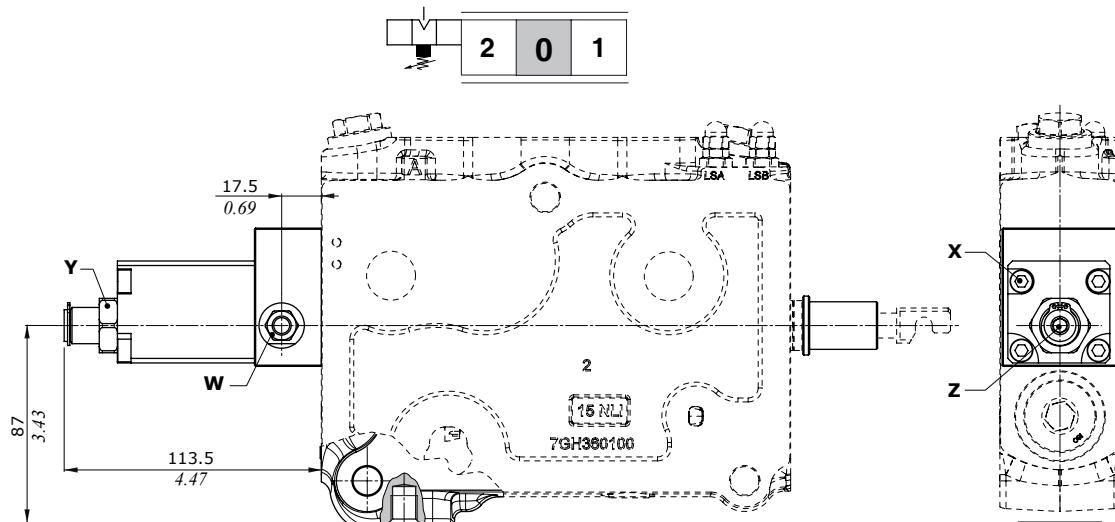

Following curves are detected with standard spools, connecting P⇒A⇒B⇒T and P⇒B⇒A⇒T ports without flow multiplication. Customized spools with backpressure or flow multiplication may require different force, pressure and pilot current for operation.

NOTE: for spools up to 120 l/min (31.7 US gpm), the effective flow on working ports may differ by 10% between the 1<sup>st</sup> an 10<sup>th</sup> section.

**Non-compensated working section**  
**Spool flow vs. Stand-by pressure**  
**(margin pressure)**

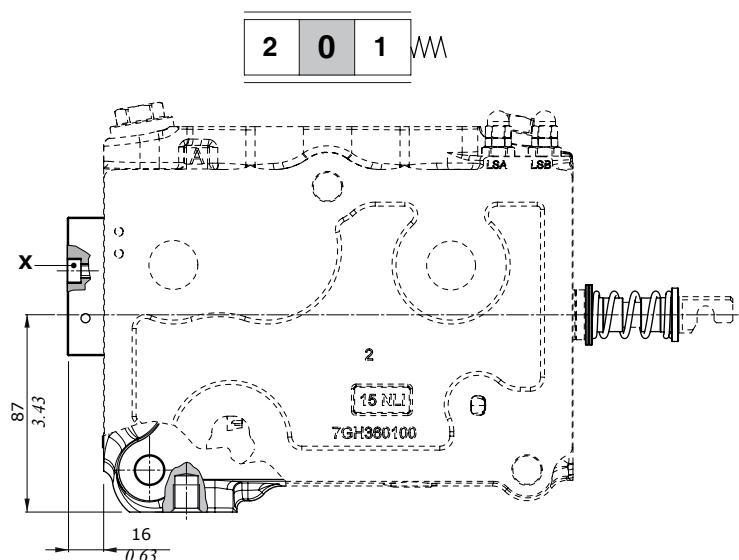

**Working section****"A" side spool control kit****With friction and center position feeling: 7FT type****Features**

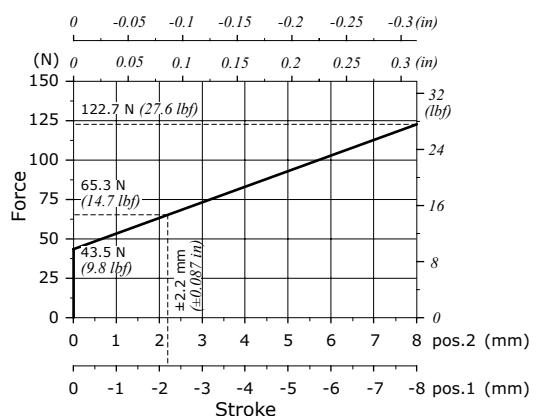

- Friction load adjusting . . . . . : 20-150 N (4.5-34 lbf)
- Friction load std. setting . . . . . : 100 N (22.5 lbf)
- Center tap (more than load) . . . . . : 100 N (22.5 lbf)

**Wrenches and tightening torques**

- X = wrench 5 - 9.8 Nm (7.2 lbf)
- Y = wrench 24 - 42 Nm (31 lbf)
- Z = allen wrench 6
- W = wrench 13 - 24 Nm (17.7 lbf)

**With spring return to neutral position: 8 type****Wrenches and tightening torques**

- X = wrench 5 - 9.8 Nm (7.2 lbf)

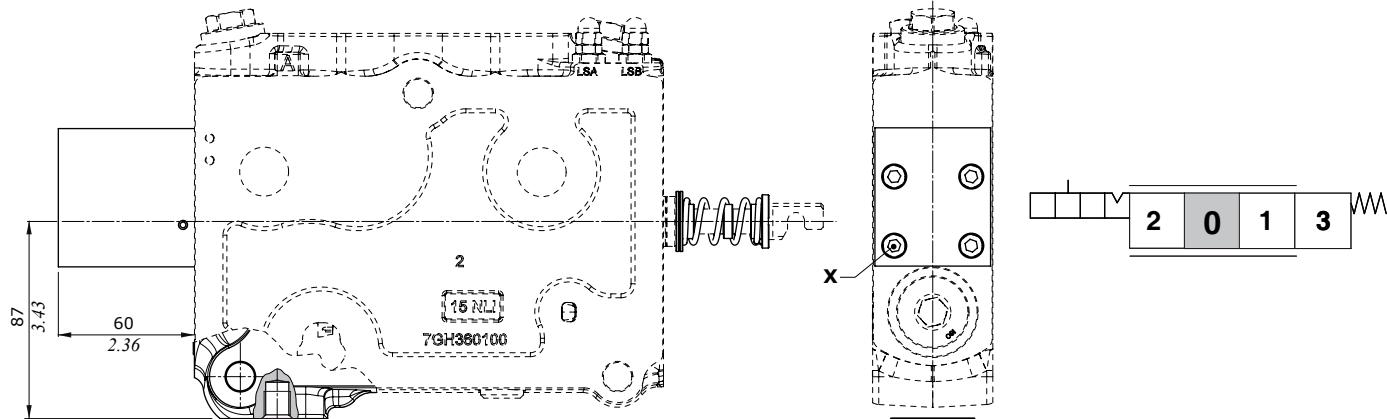

**Force vs. Stroke diagram**

## Working section

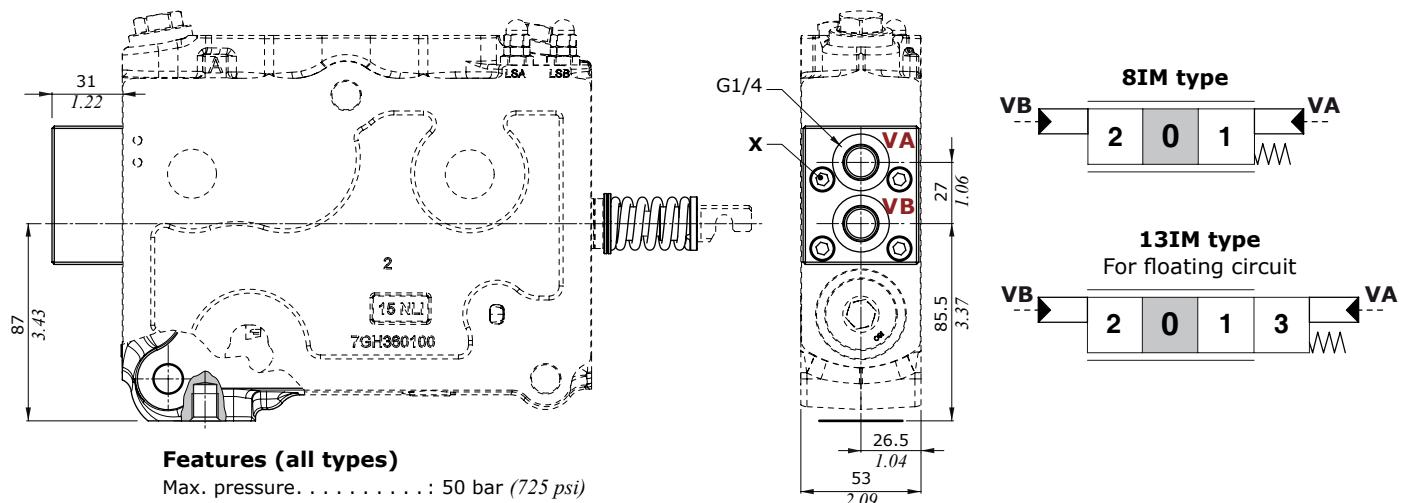

**"A" side spool control kit**

**With detent in 4<sup>th</sup> position (pos.3), for floating circuit: 13 type**

F or FV type working section and floating circuit type 5 spools are required

**Wrenches and tightening torques**

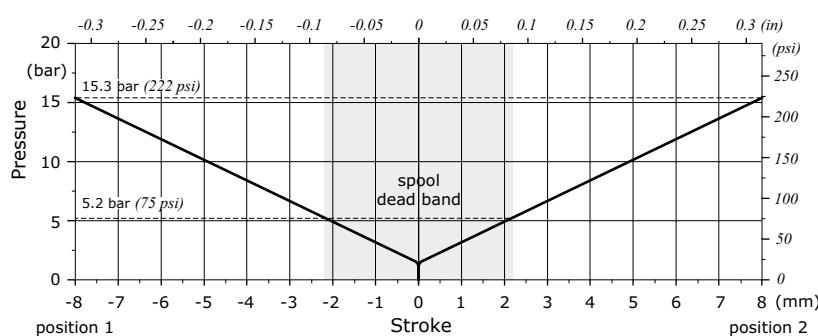

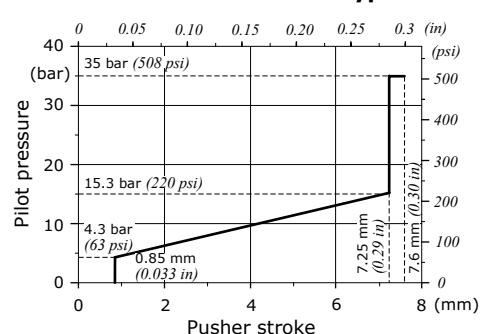

X = wrench 5 - 9.8 Nm (7.2 lbf)

**Proportional hydraulic controls****Features (all types)**

Max. pressure . . . . . : 50 bar (725 psi)

**Wrenches and tightening torques**

X = wrench 5 - 9.8 Nm (7.2 lbf)

**8IM type: Stroke vs. Pressure diagram****Type 8IM: suggested pressure control curve: 020 type**

**Working section****Electrohydraulic controls**

Following specifications are measured with:

- mineral oil of 46 mm<sup>2</sup>/s (46 cSt) viscosity at 40°C (104°F) temperature,
- 20°C (60°F) environmental temperature,
- standard spools, connecting P⇒A⇒B⇒T ports without flow multiplication,
- 12 VDC and 24 VDC nominal voltage with ± 10% tolerance.

Note (1) for the calculation rules please see "Appendix A" on page 86.

Listed electrohydraulic controls require CED400W electronic unit; for information please contact Sales Department.

**Working section****Electrohydraulic controls without on-board electronic: spool position sensor**

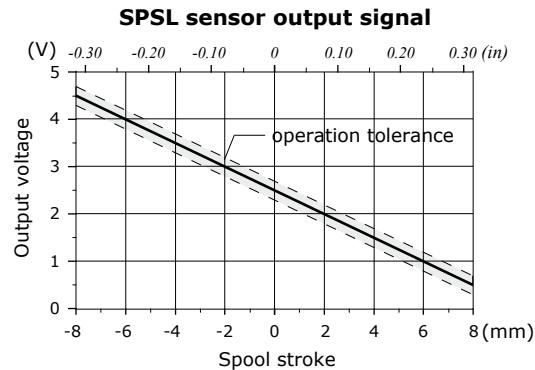

The sensor can be ordered exclusively through the electrohydraulic controls; please see page 63 for available control list.

**SPSL sensor**

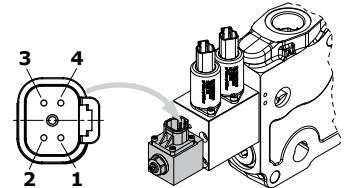

The SPSL position sensor converts the spool movements into a voltage linear signal..

**Working conditions**

Voltage supply	5 VDC
Current absorption	< 10 mA (no load)
Mechanical life	3x10 <sup>6</sup>
Connector type	DT04-4P Deutsch
Weather protection	IP67 / IP69K
Working temperature	from -40°C to 105°C (from -40°F to 221°F)
Working pressure	350 bar (5100 psi)
Max. electrical stroke	±10 mm (±0.39 in)
Max. mechanical stroke	±10 mm (±0.39 in)
Output signal	range from 0.5 to 4.5 V
	linearity ± 5%
	spool in neutral 2.5 ± 0.2 V
	max. current 1 mA
EMC compatibility	ISO 13766 / ISO 14982
Mechanical vibrations, shock, bumps	IEC 68-2-6,-27,-29

**Main rules**

The DPC Series valves are assembled and tested as per the technical specifications of this catalogue.

Before the final installation on your equipment, please follow the below recommendations:

- the valve can be assembled in any position; in order to prevent body deformation and spool sticking mount the product on a flat surface;
- In order to prevent the possibility of water entering the spool control kit, do not use high pressure washdown directly on the valve;
- prior to painting, ensure plugs on normally open ports are tightly in place.

FITTINGS TIGHTENING TORQUE - Nm / lbft						
THREAD TYPE	P inlet port	A and B workports	T outlet port	LS signal port V pilot ports*	L drain port	Hydraulic control ports

	With O-Ring seal	150 / 111	150 / 111	200 / 147	30 / 22.1	18 / 13.3
SAE J518 code 61		3/4 [3/8-16 UNC]	3/4 [3/8-16 UNC]	1 [3/8-16 UNC]	-	-
ISO 6162-1 type 1 [bolts threading]		DN 19 [M10]	DN 19 [M10]	DN 25 [M10]	-	-
bolts torque; min-max		28-40 / 20.7-29.5	28-40 / 20.7-29.5	37-48 / 27.3-35.4	-	-

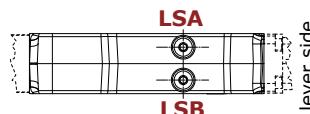

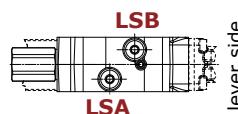

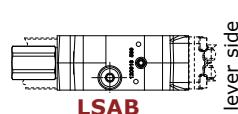

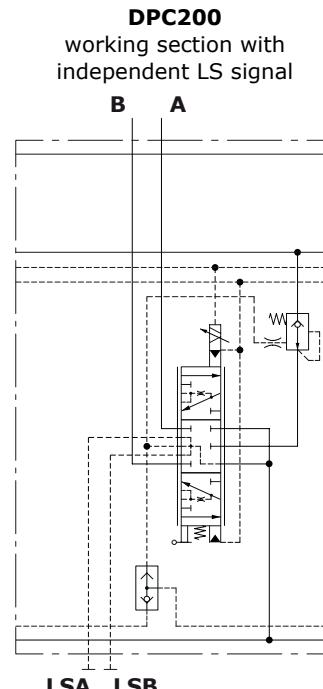

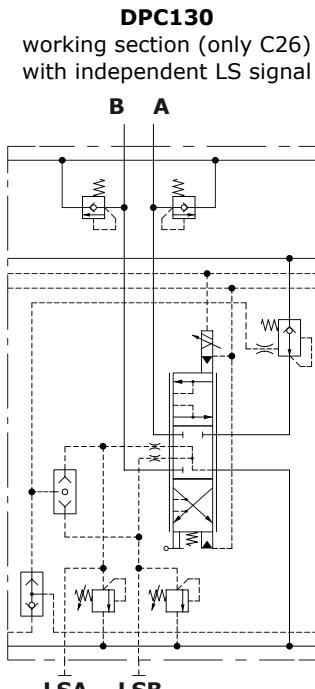

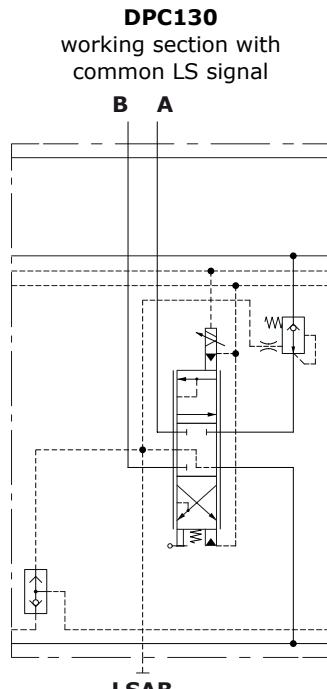

(\*) V2 port is M14x1.5 threading: tightening torque value is the same of G1/4 thread

NOTE – These torque are recommended. Assembly tightening torque depends on many factors, including lubrication, coating and surface finish.

**Main rules**

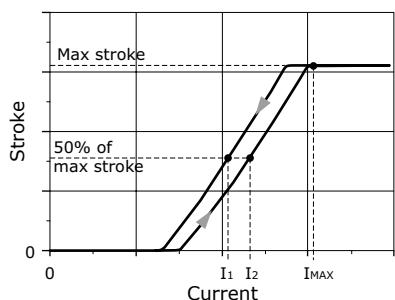

Series DPC working sections are arranged for external operation of LS signal through dedicated ports on the lower side of sections.

For the maximum permissible pipe length please contact Sales Dpt.

**Appendix A****Electrohydraulic controls: hysteresis calculation rule**

Hysteresis is calculated as difference between control currents ( $I_2 - I_1$ ), necessary to reach 50% of nominal spool stroke, referred to maximum control current  $I_{MAX}$ , necessary to reach 100% of spool stroke.

$I_2$  is determined on spool stroke increase line,  $I_1$  is determined on spool stroke decrease line.

**Example diagram for data detection**

$$\text{Hysteresis \%} = \frac{I_2 - I_1}{I_{MAX}} \times 100$$
